* If you are unable to upload, please email them to

contest-ffs@convention.co.jp

a download link is preferred to email attachments

14.Application Documents

- Submitted

◆ Client's Brief

15. Garden Title

16. Client

Example : XXX Hospital (Location: Chuo-ku, Fukuoka City)

* If no actual client is available at the time of submission, please provide a hypothetical client.

17. Client's requirements

Example : The proposed location for the garden is within the hospital property. It is intended to provide emotional comfort and healing for inpatients and hospital staff. However, maintenance by hospital staff or other internal personnel is not possible.

18. Site location

Example : A large hospital facing a major road in central Fukuoka City. The proposed garden site is located within a section of the ward building. It is a well-trafficked area used by many hospital visitors and staff. The space faces south, receives plenty of sunlight, and has good air circulation.

* Please describe the specific area, location, and orientation of the garden.

19. Garden Design Concept

Example : A place away from the bustle of the city, gently supporting both mind and body. A place to regain healing and positivity in harmony with the changing seasons.

20. Features of the Garden

Example : The garden is designed as a low-maintenance space to minimise upkeep burdens, while seasonal plants gently bring colour and create changing scenes throughout the year, offering a soothing sanctuary for the mind. The design also incorporates barrier-free accessibility to ensure that everyone can use the garden with ease, making it a welcoming place where patients and staff alike can feel comfortable stopping by.

21. Design Objectives

Example : This garden aims to provide patients, their families, and healthcare professionals with moments of calm and peace within a natural setting. By incorporating seasonal plants and natural materials, it creates a gentle "margin" within the functional hospital environment. With barrier-free and low-maintenance design, the garden is intended to be accessible to all and cherished for years to come.

* Please explain specifically how the Client's requirements have been reflected and expressed in the design.

22. Main Plants to Be Used

Example : The planting mainly consists of perennials with soft leaf textures and seasonal variations, such as hydrangeas and variegated lilyturf. Plants are selected for their fragrance and gentle movement in the breeze. Low-maintenance species that retain their beauty with minimal care are used.

* Please list the key plants that characterise your work, as detailed information will be confirmed in the planting list.

23. Atmosphere Created by Planting (Colours, Composition, Texture, etc.)

Example : Perennial flowers bloom in each season, offering gentle colours in spring, vibrant greens in summer, rich tones in autumn, and serene quietness in winter. The garden's expression changes with every visit, allowing visitors to feel the passage of the seasons and enjoy a soothing, peaceful atmosphere.

24. Soil Suitable for the Garden

Example : A lightweight and clean soil substrate is used to maintain hygiene within the hospital while being easy to install even in urban areas. It offers an excellent balance of drainage and water retention, contains an appropriate amount of organic matter, and creates an environment where seasonal plants can thrive healthily.

◆ Cost Estimate (Total Estimated Project Cost)

All amounts must be provided in Japanese Yen (JPY).

Please enter the total estimated project cost, including all Garden Designer Expenses and Construction Costs.

* If any sponsorship funding has been secured, please include it in your total estimate.
